**KLEEN FREE** and **ELF for Bugs** are very similar in their ingredients and can be used to kill many forms of insects that may be causing you problems with infestation. The main advantage of these products over the other toxic pesticides that are sold is that you can safely repeat applications until you kill all the bugs without harm to yourself, kids, pets or the environment since they are all natural, Eco Friendly and they work every time on contact, you just have to be sure to get to all the bugs because they hide well.

1. When you receive **"KLEEN FREE" or "ELF for Bugs"** in a Pre-Mixed form or you mix your non-toxic solution from a Concentrate form (mixing directions are below) you may apply it using the following methods:
2. First you must try to **identify the bugs** that you are having problems with by the symptoms that you may have developed in the form of bites and sores as well as the activity of the bugs that are causing you the problems.
3. Remember your larger bugs will of course cause larger **bites and sores on your skin and scalp**, unless you become allergic to the bite which will be much more serious and lead to infection. The larger bites will probably come from Bed Bugs and some forms of mites (there are many kinds of mites)
4. **Our products "JUST KILL THE BUGS"** so if you have sores you must treat them with some form of medicated ointment, ask your doctor about that. Our products kill the bugs so you don't get any more bites and sores.
5. **LICE:** Bites on your head or groin area are most likely from LICE. Our **Nit Free Lice Shampoo or Kleen Free or ELF for Bugs** will kill these critters. To apply these non-toxic Lice killing solutions you just lather the solution on your hair then let it soak for at least 15 minutes. This will kill the LICE; After each application you need to remove all the **NITS (LICE EGGS)** so they don't hatch and release more lice to start the whole thing over again. **NEON NITS** will help you see the NITS so you can comb them all out with our **NIT FREE TERMINATOR COMB**. This should be repeated once or twice a day for 3 days until all the LICE are gone.
6. **SCABIES AND MITES: Use 4 ounces of KLEEN FREE in your bath.**  
Soak for 15 minutes, get your hair in it also. Try to bathe in the late afternoon to early evening. Try to air dry instead of toweling off and let the **Kleen Free dry on your skin**. Plan on using KleenFree in your bath everyday for the first week then every other day the following week.  
Also use 4 ounces of Kleen Free in your washing machine. You can use a small amount of other detergent at the same time. Always use the **HOTTEST WATER** you can in all these washings and rinsing.  
Apply Kleen Free directly to the spots that are itching throughout the day.
7. **BED BUGS:** Spray the Pre-Mix KLEEN FREE or ELF for Bugs in every room in your home that you detect **BEG BUG ACTIVITY**. Mattresses, box springs, under and over... bed frame, head board, foot board, carpeting, sofas, chairs, closets, floor boards (the entire perimeter of the rooms). Inspect your furniture, baseboards, curtains, pictures, especially furniture you may have just gotten from somewhere else (this is one of the more common ways that the Bed Bugs arrive on the scene). Spray the solution everywhere you think the bugs can be hiding and repeat every day for a week then every other day for another week. The trick is to kill them as the eggs hatch.. then you have the jump on them.
8. **MIXING from KLEEN FREE CONCENTRATE:** In all situations and applications it is best to mix the KLEEN FREE CONCENTRATE with 6 parts water to 1 part KLEEN FREE CONCENTRATE. After a week or so of application you can dilute it more (8 to 1). In all applications these products are 100% safe, non-toxic and guaranteed to work (it will irritate your eyes so try not to get it in your eyes)
